Step 1:

1. Ensure your template is properly configured in your Django settings:

python   Wrap   Copy

```python
# settings.py
TEMPLATES = [
    {
        'BACKEND': 'django.template.backends.django.DjangoTemplates',
        'DIRS': [BASE_DIR / 'templates'],  # Make sure your templates folder is included
        ...
    },
]
```
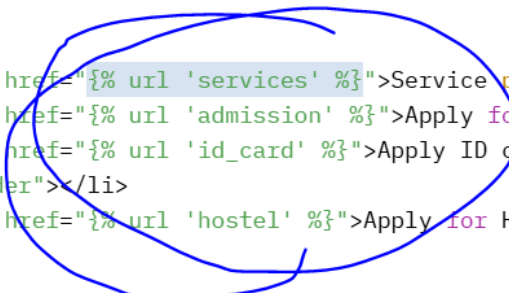

Step 2:

Here's an expanded example:

python   Wrap   Copy

```python
# urls.py
from django.urls import path
from . import views

urlpatterns = [
    path("", views.home, name="home"),
    path("services/", views.services, name="services"),
    path("about/", views.about, name="about"),
    path("admission/", views.admission, name="admission"),
    path("id-card/", views.id_card, name="id_card"),
    path("hostel/", views.hostel, name="hostel"),
]

# views.py
from django.shortcuts import render

def home(request):
    return render(request, "index.html")

def services(request):
    return render(request, "services.html")

def about(request):
    return render(request, "about.html")

def admission(request):
    return render(request, "admission.html")

def id_card(request):
    return render(request, "id_card.html")
```

Step 3:

```html
</li>
<li class="nav-item dropdown">
    <a class="nav-link dropdown-toggle" href="#" role="button" data-bs-toggle="d
        Services
    </a>
    <ul class="dropdown-menu">
        <li><a class="dropdown-item" href="{% url 'services' %}">Service page sh
        <li><a class="dropdown-item" href="{% url 'admission' %}">Apply for Admi
        <li><a class="dropdown-item" href="{% url 'id_card' %}">Apply ID card</a
        <li><hr class="dropdown-divider"></li>
        <li><a class="dropdown-item" href="{% url 'hostel' %}">Apply for Hostel<
    </ul>
</li>
```

n Grok help?
